

Website Testing Documentation

Introduction

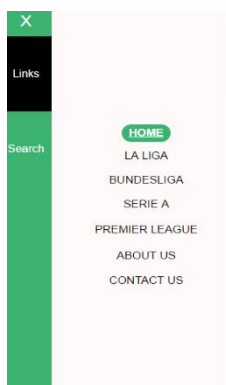

Before uploading anything on to GitHub, I carried out user testing, as a means to gather suggestions for improvements and to identify/eradicate any issues or problems. I carried out the testing procedure throughout my development process to prevent me from uploading broken elements and pages on to GitHub. The whole testing process proved to be vital as it enabled me to view the website from a user perspective. It enabled me to see the faults and issues within my website. Also, it enabled me to take on suggestions which I took on board to make changes. Overall, the testing process fundamentally enabled me to improve my website.

I carried out my user testing in a page by page process for instance when I had created a html page and the CSS for that associated page I would then have it tested by a user. This is because a user would be able to spot more issues and faults than myself the creator. I conducted my testing in a case by case process.

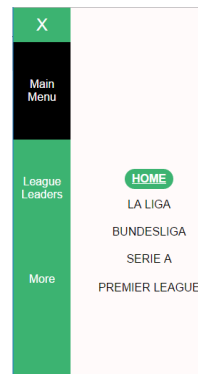

Test Case 1

Initially I had planned to put all my links for my mobile navigation bar in to one place as you can see from the screenshot below. During testing, a user pointed out that I should split this in to three segments as it would look more professional. I made this improvement as you can see from the 'after testing' screenshot shown below.

Changes made After Testing

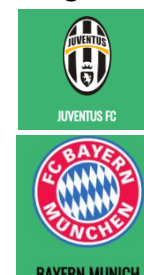

Test Case 2

During testing, it was pointed out that the Juventus and Bayern Munich Logos did not seem to appear as you can see from the 'before testing' screenshots shown below. This is because I did not add the links for the logos properly which caused this issue. The 'after testing' screenshots show that I fixed the issue.

Before Testing

Changes made After testing

Test Case 3

During testing, it was pointed out that one of my YouTube video links was broken. I changed the broken video link on Premier league page as shown in the before and after testing screenshots shown below.

Before Testing

Highlights of Stokes Downfall Against Chelsea.

Chelsea thrash Stoke City by 4 goals to 2 in a quite brilliant encounter.

After Testing

Highlights of Stokes Downfall Against Chelsea.

Chelsea thrash Stoke City by 4 goals to 2 in a quite brilliant encounter.

Test Case 4

During testing, it was pointed out to me that the league titles should have description to explain each title so the user knows what is going on. The screenshots below show me taking the suggestion on board.

Changes made After Testing

Test Case 5:

During testing, it was pointed out to me that the navbar is behaving as it should when the links are being hovered over upon and that I should add padding to correct this issue. The screenshots below show me fixing this issue.

Before Testing

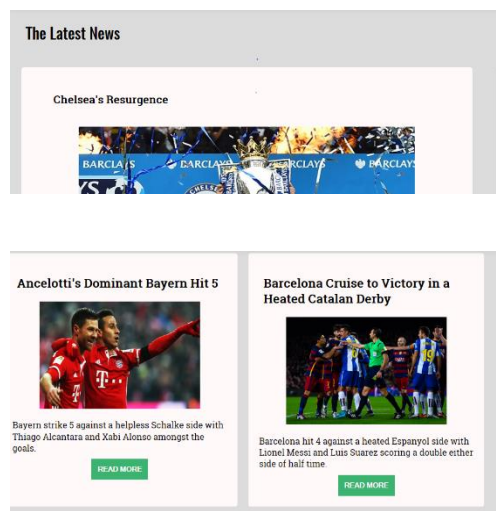

Changes made After Testing

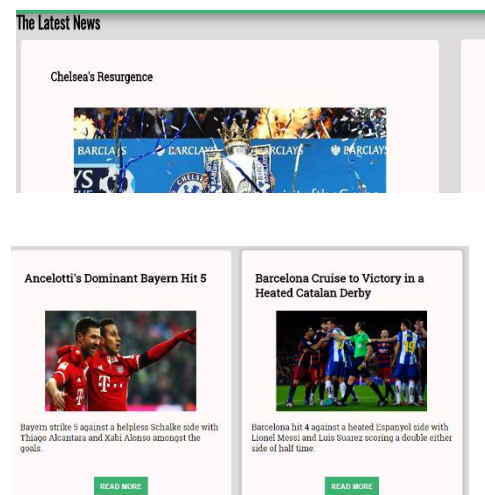

Test Case 6

During testing, it was pointed out to me that my content was not aligned properly, therefore I went away and aligned my whole website accordingly. The screenshots below show that I have addressed and resolved this problem

Before Testing

Changes made After Testing

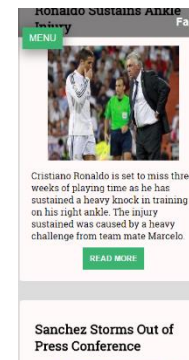

Test Case 7

During testing, it was pointed out that there were issues with my responsive design as there my articles were overlapping one another on every page when making the browser window small. The screenshots below show that I have resolved the issue.

Before Testing

Changes made After Testing

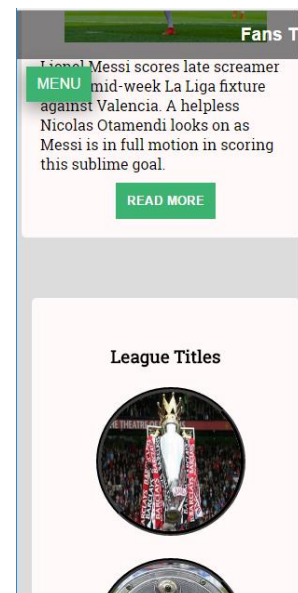

Test Case 8

During testing, it was pointed out that my league titles were missing when reducing the size of the browser window, this is because I had forgotten to include them when creating my responsive design. The screenshots below show that I have resolved this issue.

Changes made After Testing

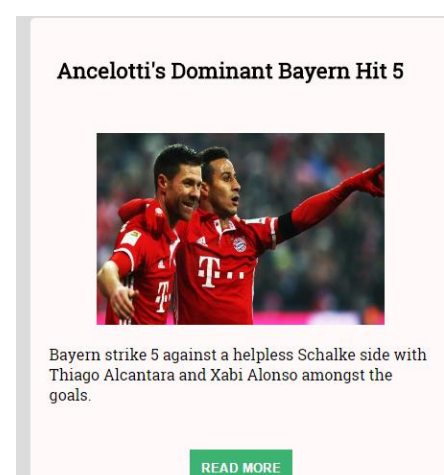

Test Case 9

During testing, it was pointed out that I had made many grammatical errors within content all over the website. To resolve this I went through my entire website and corrected the grammar mistakes that I had made. The screenshots below show that I have resolved this issue.

Changes made After Testing

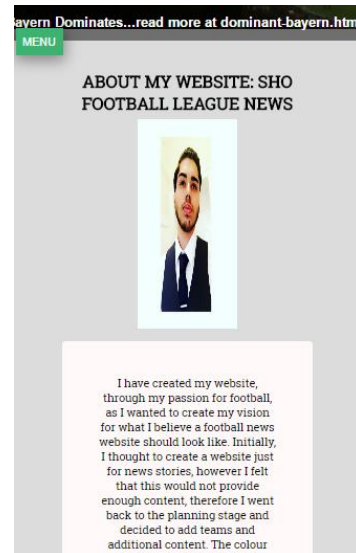

Test Case 10

During testing, I received a suggestion in to making a change to my about us page, the suggestion was to replace the logo image with an image of myself as the about us page should show myself. The screenshots below show that I have made this change and taken this suggestion on board.

Test Case 11

During the test stage, after I completed my development, I tested my website on all devices (Tablet, Mobile Phone, Laptop, PC Desktop). This proved to be successful as my website works perfectly on all devices as the following screenshot shows:
